Whatever the complexity or the scale of your purification process is, the BUCHI preparative chromatography systems are designed to fulfill your changing needs. Together with a broad range of high performance flash chromatography columns, we provide optimized solutions suited to your purification workflow.
“Quality in your hands” is the guiding principle that shapes our philosophy and our actions. It challenges us to provide outstanding services that are precisely tailored to your needs. This means that we must stay in close contact with our customers. That is why we keep in touch and continue to work very hard to understand you and your business even better.

We help you by providing high-quality products, systems, solutions, applications and services that offer you added value. This allows you to focus entirely on your processes and your work.

Core messages to our customers
BUCHI creates added value with “Quality in your hands”

Easy
You handle complex processes, do challenging work and want to focus on what is essential. We support you by providing carefully designed solutions as well as instruments and systems that are easy to operate.

Competent
You need products, systems, solutions, applications and services that are precisely tailored to your needs. We have the technological expertise and decades of experience needed to provide competent support and work with you to continually improve our market services.

Reliable
You want to be able to rely completely on your partner for products, systems, solutions, applications and services. We guarantee the quality and functionality of our equipment and will continue to help you quickly and efficiently whenever something does not operate to your satisfaction.
Global
You value personalized service and short communication channels. As an international family-owned business with our own subsidiaries and qualified distributors, we have a presence wherever our customers are located. Our local staff and the large number of satisfied customers around the world give you the assurance that you are working with the right partner.

Cost-effective
You want to achieve the best possible results using efficient solutions. We help you to handle your jobs and processes economically. We strive to create a high level of economic benefit and maximum added value for you.

Safe
You are working in an environment in which safety is a high priority. By collaborating closely with you, we do everything in our power to make our products, systems, solutions, applications and services as safe as possible for people and the environment.

Sustainable
You prefer a partner who acts responsibly when it comes to current environmental challenges. We support environmentally friendly processes and manufacture products that have a long service life. We utilize advanced technologies in order to conserve energy and water and leave the smallest environmental footprint possible.
Flexible purification solutions tailored to your needs
From synthesis or extraction to pure compound isolation

For more than 30 years, BUCHI preparative chromatography equipment has been widely used for the purification of high value products. Compounds such as “Active Pharmaceutical Ingredients” (APIs) or specialty chemicals are generated by organic synthesis, biochemical process or extraction. The end result must always be further concentrated and purified. BUCHI chromatography solutions allow the purification of compounds from a few milligrams up to several hundred grams.

Pharmaceutical

- Purification of APIs after organic synthesis (Medicinal Chemistry)
- Screening of natural compounds: isolation of various components after extraction
- Biotechnology: purification after fermentation process

Chemicals

- Purification after synthesis
- Preparative isolation of a compound from a formulation

Food

- Nutraceuticals: isolation of dietary supplements from natural compounds

Academia

- Preparative chromatography education
- Purification after synthesis or extraction
Purification process

The isolation of one or more components from a complex mixture usually requires multiple steps if purity and high recovery rates are targeted. Flash chromatography is used to perform a first fast separation. The collected fractions are then later reinjected in a preparative HPLC system to achieve the target purity.

Discover our preparative chromatography solutions:
www.buchi.com/chromatography/solutions
You face an increasing number of samples to purify, whether after an organic synthesis or an extraction step. You would like to perform the whole purification process in your own laboratory in order to isolate the pure compounds faster for further analysis. Our Solution “Preparative Chromatography Dual” allows you to run both flash and preparative HPLC separations on the same system. It is equipped with an easy to use integrated touch screen software interface.
Your most important benefits

Fast purification of any sample at any scale

- One system for flash chromatography separation and subsequent preparative HPLC purification of the relevant fractions. Usage of preparative HPLC columns filled with 10 – 15 µm silica particles thanks to maximum pressure of up to 100 bar (1450 psi)
- Fast optimization of the flash separation with optimized software features (automatic gradient optimization, TLC data transposition)
- All compounds detected at once using the integrated UV detector together with the optional Evaporative Light Scattering Detector (ELSD)

High performance separation

- Full separation optimization capabilities with integrated quaternary gradient functionality
- Optimal fraction purity: very selective separation on highly efficient columns filled with small sized particles

Ease of use

- Prep HPLC as easy to use as flash chromatography
- Straightforward operation using integrated touch screen interface
- Intuitive handling thanks to graphical user interface designed for purification applications
- Easy connection of flash cartridges, glass columns or preparative HPLC columns

Your solution “Preparative Chromatography Dual”

- PrepChrom C-700 system: quaternary gradient pumping system, 250 mL/min, 100 bar (1450 psi), liquid or solid sample injection, UV detection, fraction collection
- ELS detector C-650
- Sepacore® Flash cartridges
- Glass columns
- Prep HPLC columns

- Reference applications
- Laboratory chromatography guide
- Customized application support
- Practical workshops, trainings and seminars
- Minimized downtime thanks to our service hotline

Find short notes of our applications and workshop at: www. buchi.com/Chromatography
More detailed application notes are available upon request
You have complex samples such as extracts of natural compounds to purify and need to scale up the purification process in order to cope with a large sample load. The Sepacore® X50 Flash Chromatography system provides an optimum flexibility to use high efficiency columns whatever the packing and column size is.
Your most important benefits

High performance flash purification

- High efficiency at up to 50 bar (725 psi). No limitation in selection of columns for normal/reverse phase separation mode (incl. small particle size silica)
- Time saving when optimizing the detection conditions with the simultaneous monitoring of 4 wavelengths in UV-Vis range
- Recognition of eluting compounds with on-line UV scan
- Every single compound can be collected thanks to the multisignal monitoring for peak detection and fraction collection

Flexible

- Easy modular system expansion: control via integrated touch screen or separate computer
- Possibility to add an additional fraction collector for extended collection capacity, ELS universal detection
- Free choice of fraction collection vessel and pattern to suit changing application requirements

Scalable

- Sample injection scalable from a few milligrams up to hundred grams on flash cartridges up to 800 g or glass columns
- Stable performance when scaling up using a flow rate up to 250 mL/min

Your solution «Preparative Chromatography Versatile»

- Sepacore® X50 system including:
  Binary gradient pumping system 250 mL/min, 50 bar (725 psi), liquid or solid sample injection, UV-Vis detection, fraction collection, Control Software
- Sepacore® prepacked flash cartridges*
- Glass columns
- ELS detection

- Reference applications
- Laboratory chromatography guide
- Customized application support
- Practical workshops, trainings and seminars
- Minimized downtime thanks to our service hotline

* Optional self-filling of empty cartridges with the Cartridger®

“The high pressure rating of the Sepacore® system allows to reproduce some HPLC methods, such as for the preparative separation of diastereoisomers.”

Provider of products and services for the pharmaceutical industry, UK
You routinely purify your samples on an open glass column and have to cope with a limited resolution and a long separation time. As a first step toward automation, we offer a small system allowing to control the flow rate and the eluent composition. The «Preparative Chromatography Easy» purification system addresses the requirements specific to the isolation of compounds from a synthesis mixture.
Your most important benefits

**Improved separation**
- Fine-tuned separation efficiency using gradient elution
- Controlled separation optimization with precise monitoring of the eluent composition
- Increased purity of the collected fractions with a higher resolution of the separation

**Time and money savings**
- Reduced elution time from hours to minutes with controlled flow rate and solvent composition allowing to reduce the fraction volumes for a faster evaporation
- Decreased purification cost with lower solvent consumption
- Low initial investment with upgrade possibilities

**Easy and safe**
- Intuitive control of pumping parameters: no training required
- Minimized solvent exposure

**Your solution «Preparative Chromatography Easy»**

- Sepacore® «Easy Synthesis» purification system including: Binary gradient pumping system 250 mL/min 10 bar (145 psi)*, Injection valve (up to 5 ml sample), System stand with cartridge holder and connectors, Set of silica flash cartridges
- Sepacore® prepacked flash cartridges**
- Fraction collection racks
- Reference applications
- Laboratory chromatography guide
- Customized application support
- Practical workshops, trainings and seminars
- Minimized downtime thanks to our service hotline

* Similarly, the «Easy Extract» purification system allows you to purify larger sample volumes on glass column at a pressure up to 50 bar (725 psi)
** Optional self-filling of empty cartridges with the Cartridger®

Find out more about the Sepacore® purification systems:
www.buchi.com/purification-systems
You are looking for a cost-effective yet high performance initial system to run your purifications which could later evolve with your needs. We provide a basic flash pumping system allowing you to take full advantage of your columns’ separation potential.

**Solution «Preparative Chromatography Starter»**
Efficient and upgradable purification start-up system

- Glass columns C-690
- Sepacore® «Starter» flash system
- Cartridger C-670
Your most important benefits

Cost effective

- Save time running unattended separations
- Decrease solvent consumption by reducing elution time
- Controlled flow rate and elution composition allow to significantly reduce the separation time and consequently the solvent consumption

Easy to use

- Straightforward user interface: easy programming of parameters, no training required
- Easy maintenance: all connections and functional parts are easily accessible
- Avoid running out of solvent: the monitoring of the solvent consumption prevents the column from getting dry

Upgradable

- Gradually upgrade the configuration from a manual to a fully automated chromatography system
- Modular system expands according to budget and applications:
  - Basic isocratic flash system
  - Gradient flash system
  - Gradient flash system including detection and fraction collection, with or without computer control

Your solution «Preparative Chromatography Starter»

- Pumping module, up to 250 mL/min, 10 bar (145 psi)*
- Glass columns
- Cartridger® and empty cartridges
- Reference applications
- Laboratory chromatography guide
- Customized application support
- Practical workshops, trainings and seminars
- Minimized downtime thanks to our service hotline

* Optional pumping module up to 50 bar (725 psi)

“The easier, more flexible, unsupervised instrument requires less time and manpower to do efficient research.” Dr. XianWen Yang, Professor of South China Institute of Oceanology, Chinese Academy of Sciences, Guangzhou, China

Flash chromatography column for any solution
Choose the column for your need

You have to deal with a large variety of samples in terms of complexity, purity or polarity and the amount of sample to purify may also vary to a large extent. The type of columns you select must not only allow you to perform the separation, but also be compatible with your economical requirements. We have a column for almost any flash chromatography application: prepacked or empty cartridges, glass columns.

Time and cost savings: Sepacore® Flash cartridges

Speed up your purification process
- Optimized separation in only one run: high resolution separation with high quality silica and optimized packing process
- Fast separation with high flow rate: minimized pressure build-up thanks to a tight range of silica particle size

Efficient separation at controlled cost
- Ready to use cartridge: no need to fill a column for each separation
- Purification performed at once: always one cartridge available for your application with the broad range of sizes and packing types

Broad range and extensive choice of sorbents:
From 4 g up to 330 g, plus 800 and 1500 g for silica and C18. High performance silica HP (15 – 40 µm) for challenging separations

Ultimate flexibility with optimized economy: self-packed cartridges

**Cartridger®:** a unique solution for fast and easy packing of polypropylene cartridges
- Less than a minute required to pack a cartridge
- Homogeneous packing: patented process using fluidized silica provides high performance cartridges

**Flexible and cost saving solution**
- Free choice of silica
- On demand cartridge packing: no storage
- Reusable polypropylene cartridges

Visibility and scale-up: Glass columns

**Visibility**
- Follow up of the separation of colored compounds
- Visual observation of the packing status

**Maximum scale up flexibility**
- Sample loading up to more than 300 g
- High efficiency purification with back pressure up to 50 bar
- Free choice of sorbent

**Broad range to suit most applications**

What are the benefits of a medium (50 bar/725 psi) or high pressure (100 bar/1450 psi) pumping system?

It allows running reversed phase separations even at high flow rates. The solvents used in reversed phase applications (such as water/MeOH) have a higher viscosity than the ones used for normal phase separations: in particular the mixtures of water and methanol have a viscosity twice as large as water alone. This is the reason why only a medium pressure pump can be used for high scale reversed phase purifications.

Such a pressure is also useful to work with smaller particle size columns: BUCHI Silica HP is 15 µm instead of 40 – 63 µm for other standard packing materials and the back pressure generated significantly grows when the particle size decreases:

\[
\text{Back pressure} = \frac{k}{(\text{particle size})^2}.
\]

What are the upgrade possibilities of the BUCHI Sepacore purification solutions?

The unique modularity of the Sepacore® systems allows you to gradually upgrade your configuration from a manual to a fully automated chromatography system. Each module can be individually controlled and the initial system expanded according to budget and applications.
What is the advantage of the silica HP cartridges?

The Sepacore® silica HP sorbent is designed for challenging separations or when a higher purification throughput is required. Decreasing the sorbent particle size brings the following advantages:
- High separation efficiency for difficult separations
- Higher throughput with larger flow rates and same efficiency
- Higher loading capacity

The following example illustrates the benefits of using the Silica HP sorbent compared to the standard Silica:

a) Dibutylphthalate  
b) Diethylphthalate  
c) Dimethylphthalate

Separation of dimethyl-, diethyl- and dibutylphthalate  
Hexane/Ethyl acetate 80/20, 10 mL/min

Number of theoretical plates N = 82  
Sepacore® Silica 4 g

Number of theoretical plates N = 185  
Sepacore® Silica HP 4 g

How many times can a flash cartridge be reused?

Generally the silica flash cartridges cannot be reused because some compounds might bind to the packing and potentially contaminate a further separation. However, the same compound can be reinjected several times (usually up to 5 times) on the Sepacore® Flash cartridges because of the high quality of the packing process. The cartridges packed with functionalized silica (C18, Diol, Amine, Cyano) can be reused several times if the column was properly rinsed at the end of the separation.
Complete your preparative chromatography portfolio
Complementary and related products

The following products are the ideal complements to your purification system. Most of our customers use them in their isolation and purification process.

**Laboratory Rotary Evaporator**

The Rotavapor® R-210/R-215 features a complete evaporation solution offering maximum safety for your compound.

**Parallel Evaporator**

The Syncore® Analyst parallel evaporator efficiently and safely evaporates the fractions collected with your preparative chromatography system.

**Industrial Rotary Evaporator**

Use the BUCHI industrial rotavapors R-220 SE or R-250 for solvent recycling when performing large scale purifications.

**Soxhlet Extraction**

Automate your solid-liquid extraction process using the Extraction Unit B-811.

**SpeedExtractor**

Optimize your extraction process with the Speed-Extractor E-914 or E-916, the best in its class for pressurized extraction.

**Melting Point**

Check the purity of your compounds using the M-560 or M-565 Melting Point product for melting point or boiling point determination.

**Vacuum Pump**

Easy to use, reliable, silent and compact V-700 Vacuum Pump for all your evaporation processes.

**Recirculating Chiller Mixer**

Sustainable cooling in accordance with economical and ecological needs is achieved with the Recirculating Chillers F-108 and F-114.

**For optimal extraction, prepare your sample using the B-400 Mixer for an efficient homogenization.**

**Automate your solid-liquid extraction process using the Extraction Unit B-811.**

**Optimize your extraction process with the Speed-Extractor E-914 or E-916, the best in its class for pressurized extraction.**
